

Calling all coding fans... a summer of hands-on code-breaking adventures await in Leeds city centre!

Visit MathsCity during the holidays to unlock hours of cryptic fun with over twenty interactive coding activities and crafts.

An exciting highlight to this mathematical playground is our brand-new Cipher Wall – a large, digital arcade-game with tonnes of secrets messages to solve on a giant LED screen. Your mission is to decipher each animal code to cross them off the spotter's guide - can you beat the levels to find them all?!

Unlock secrets on the Scytale and Grille Cipher or create your own mysteries for friends and family to de-code by writing hidden messages or drawings with 'invisible ink' using UV pens and lights.

You can also have fun with morse code, prime numbers, and special red filter glasses, as well as getting the chance to test out our new coding prototypes.

For the crafty code-breakers out there, you can make your own code wheels and Scytale strips to encode your messages like the Romans. Take them with you as a souvenir and develop your code-breaking skills at home!

Located on the top floor of Trinity Leeds shopping centre, visitors can immerse themselves in a secret world hidden within the centre of Leeds.

Book tickets online to guarantee entry.
