

Explore the Wild Side of Maths this Summer

If you go down to MathsCity this summer, you're sure of a big surprise...

As Leeds City Centre is transformed into a bear hunt adventure with its free public art trail, we're inviting you to continue exploring when you visit our mathematical wonderland.

Discover the wild side of maths with bears, books, and picnic-themed activities all summer long!

Using origami paper crafts and storytelling, bring your very own bears to life at our crafts station and take home a souvenir of your adventure.

You can also get involved in an exciting exploration of the newest, grizzly-bear-sized mathematical discovery – the aperiodic monotile! Using a single shape that can tile infinitely without any repetition, decorate your very own bear monotile. Can you help bring to bear a giant picnic blanket made from all the monotiles created at MathsCity over the holidays?

There will be plenty to see and do with over 30 fascinating hands-on exhibits, puzzles and games. For a refreshing twist on Sudoku, see if you can bear fruit in a fun game of Cups and Saucers, or navigate uncharted territory by climbing inside our huge bubble and impressive kaleidoscope!

Tickets are available online now – bear in mind visitor numbers are limited to allow everyone to enjoy the experience, so we recommended booking in advance.
